Feature Guide — Product View Tab

The volume used to calculate growth-based rebates

What This Tab Shows

This tab shows both **Growth over Baseline** and **Growth to Baseline** contract structures. The Baseline tab shows exactly what that baseline number is and how close the customer's current volume is to it, under either structure.

Key Columns

Contract Short Name | Common Unit Size | Roster Group | Agg Level | Discount Type | Common Units Qty | Agg/Combo Units | **Baseline** | **GOB %** (Growth Over Baseline)

Real Example: Cosentyx's modest growth above baseline at Infusion Express

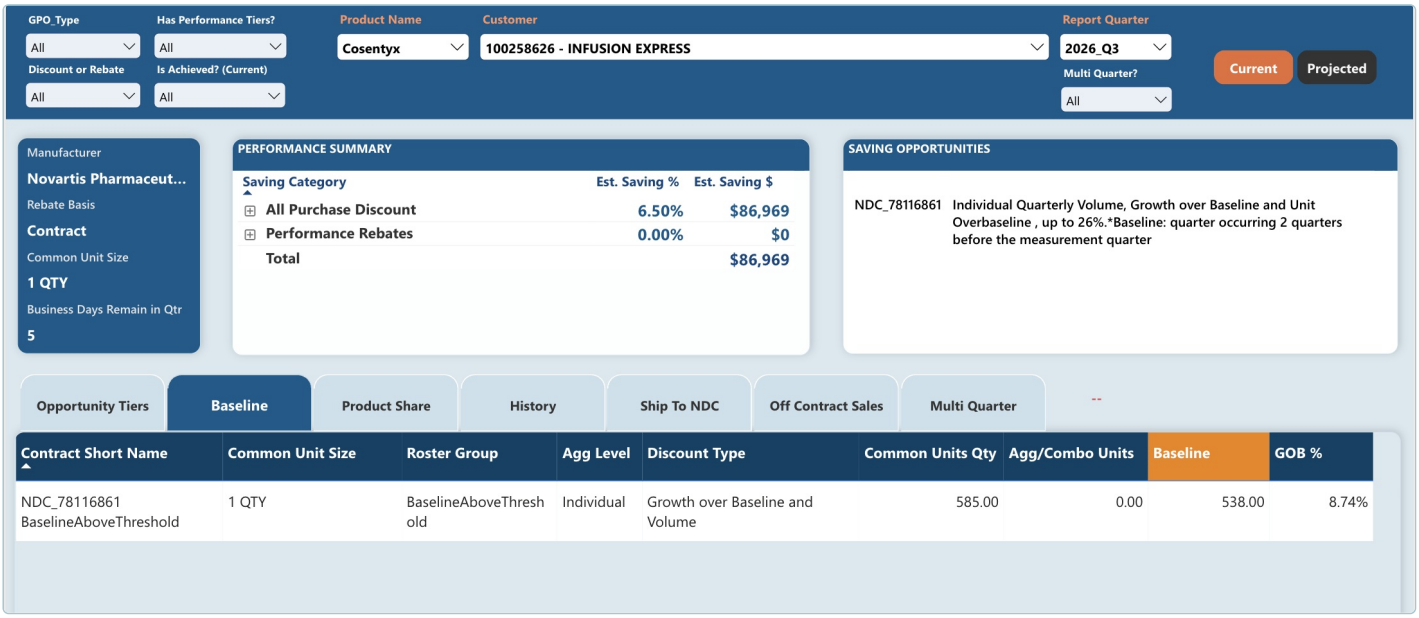

Customer 100258626 - Infusion Express | Product: Cosentyx | Manufacturer: Novartis Pharmaceuticals

Contract: NDC_78116861 BaselineAboveThreshold **Agg Level: Individual** **Discount Type: Growth over Baseline and Volume**

Total savings here is **$86,969** (6.50% All Purchase Discount). Common Units Qty is **585.00** against a Baseline of **538.00** — a GOB % of just **8.74%**. The Saving Opportunities panel spells out the structure: "*Individual Quarterly Volume, Growth over Baseline and Unit Overbaseline, up to 26%. Baseline: quarter occurring 2 quarters before the measurement quarter.*"

Why this matters: At 8.74%, this customer has only a thin cushion above baseline — a much tighter margin than a customer sitting near 50% growth. Worth flagging that a slight dip in purchasing next quarter could affect this rebate, and that the rate can climb up to 26% with more volume.

> **If the customer asks:** "How is our baseline determined?" → Per the Saving Opportunities panel, baseline is set from the quarter occurring 2 quarters before the measurement quarter — not a prior-year comparison like some other contracts.

Baseline tab — Cosentyx / Infusion Express. GOB % of 8.74% — a thin cushion above baseline, with room to grow up to 26%.

Reading Baselines Alongside Opportunity Tiers

A high Est. Saving % on the Performance Summary panel can hide very different underlying situations. Always check the Baseline tab's GOB % to see whether a customer is comfortably above a tier or just barely qualifying — the right conversation differs for each.

GOB % feeds directly into the Min GOB threshold used in the Opportunity Tiers and Multi Quarter formulas — see the Feature Guide - Opportunity Tiers appendix for the full formula set.
