Off Contract Sales

Feature Guide — Product View Tab

Invoice-level detail for purchases made outside the GPO contract

ONMARK & UNITY GPO

...tracking value, together

What This Tab Shows

Off Contract Sales lists individual invoice line items where a purchase was flagged as happening **outside** the customer's eligible GPO contract structure — meaning that volume isn't counted toward the rebate/discount totals shown elsewhere on Product View.

Key Columns

Product Name | Ship To Name | NDC | Calendar Date | Pricing Date | Billing Type | **On GPO Contract?** | Invoice Qty

Real Example: Soliris off-contract purchasing at Infusion Express

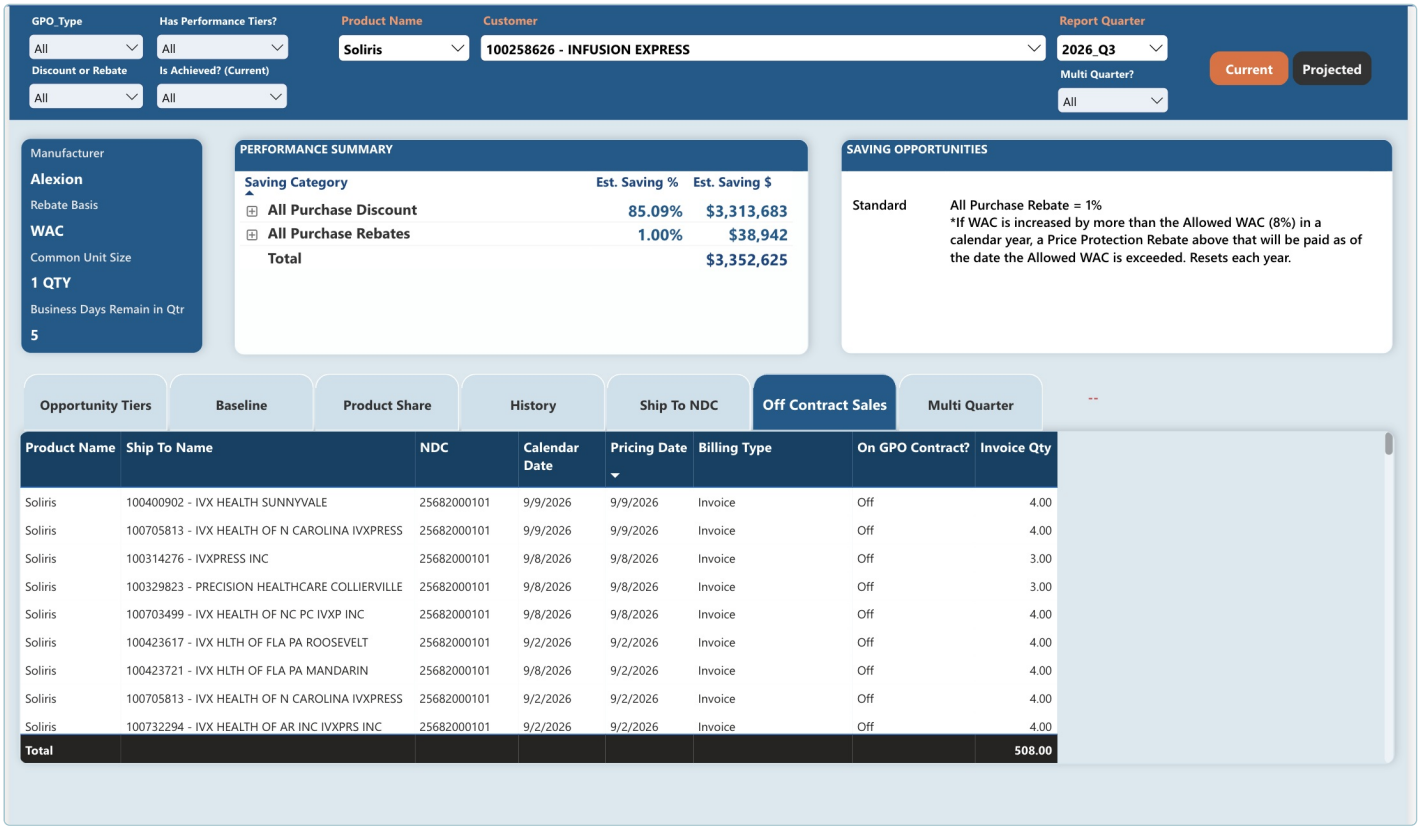

Customer 100258626 - Infusion Express | Product: Soliris | Manufacturer: Alexion

On GPO Contract? = Off **September 2026** **Total: 508 units**

Total savings here is **$3,352,625** — 85.09% All Purchase Discount ($3,313,683) plus 1.00% All Purchase Rebate ($38,942). Despite that strong headline number, Off Contract Sales shows **508.00 total units** purchased off-contract in September 2026 alone, spread across nine different ship-to accounts with invoices of 3-4 units each. The Saving Opportunities panel spells out a date-triggered rebate clause: "*Standard: All Purchase Rebate = 1%. If WAC is increased by more than the Allowed WAC (8%) in a calendar year, a Price Protection Rebate above that will be paid as of the date the Allowed WAC is exceeded. Resets each year.*"

Why this matters: Even a customer with an 85%+ discount rate still has real off-contract leakage — 508 units spread thin across many small accounts is easy to miss without checking this tab directly.

> **If the customer asks:** "What's the Price Protection Rebate about?" → It's a WAC-increase safeguard — if list price climbs more than the Allowed WAC (8%) in a calendar year, the customer gets an extra rebate on the excess, resetting annually.

Off Contract Sales tab — Soliris / Infusion Express. 508 total units flagged "Off," with a Price Protection Rebate clause shown.
