Feature Guide — Opportunity Highlights Page

Portfolio-wide ranking of rebate opportunities by ROI % and Days of Purchase

What This Page Shows

Opportunity Highlights ranks every product and tier a customer could still reach — across their entire portfolio — by ROI % and Days of Purchase, so you can see which rebate opportunities are most valuable and most achievable without opening each product one at a time. A Current / Projected toggle shows what is open today versus what is likely to still be open at quarter end.

Key Columns

Product Name | Agg Level | Saving Type | Discount or Rebate | Common Unit Size | Common Units | Tier Level | Min Units at Tier | Shortfall | Days of Purchase | Saving % | Incremental Cost | Incremental Saving | ROI % + **ROI % x Shortfall** and **Top Contract Opportunities** charts

Filters & Slicers

Report Qtr | Product | Customer | Include zero-purchase products | **Only Show Next Tier?** | Agg Level | Delivery Type | Current / Projected toggle. Two range slicers — **Days of Purchase** (min/max) and **ROI %** (min/max) — narrow the list, and **Clear all slicers** resets them.

Real Example: Two near-term gaps at UCLA Community Oncology Practices

Customer 202625 - UCLA Community Oncology Practices | Products: Elahere, Actemra | Report Qtr: 2026_Q3

Current → Projected

In the **Current** view, Elahere is just **4 units short** of Tier 4 (197.0 needed, 193.00 purchased) — only **1.22 Days of Purchase** from a 4.00% rebate. Closing the gap takes **$27,255.64** of incremental purchases and unlocks **$27,391.92** of incremental saving: an **ROI of 100.50%**. Actemra is 12 units short of Tier 3 (153.0 needed, 141.50 purchased), 4.80 Days of Purchase, a 13.00% rebate, and a **59.86%** ROI.

Switch to **Projected** and the picture changes: projected units are **209.36** for Elahere and **153.49** for Actemra — already above the tier minimums of 197.0 and 153.0 — and both rows show no shortfall and a 0.00% ROI. At the current purchasing pace, both tiers are likely to be reached on their own.

Why this matters: Current shows which gaps exist today; Projected shows which of them will close without any action. Spend your time on opportunities that are still open in Projected, not on ones that will clear by themselves.

> **If the customer asks:** "Which products should we focus on this quarter?" → Start in Projected, set Days of Purchase to the business days remaining, sort by ROI %, then confirm each pick on that product's Opportunity Tiers tab.

Reading the Visuals

ROI % x Shortfall (scatter chart) plots every product + tier by Shortfall in Days of Purchase (x-axis) against ROI % (y-axis); shading reflects Incremental Saving. The best opportunities sit toward the **top-left**: high ROI, low shortfall. **Top Contract Opportunities (bar chart)** ranks the highest-value opportunities by Incremental Saving $, with the shortfall in days of purchase labeled on each bar — a quick "where should I focus" list.

```
Days of Purchase = Shortfall ÷ Unit Per Day

ROI % = Incremental Saving ÷ Incremental Cost

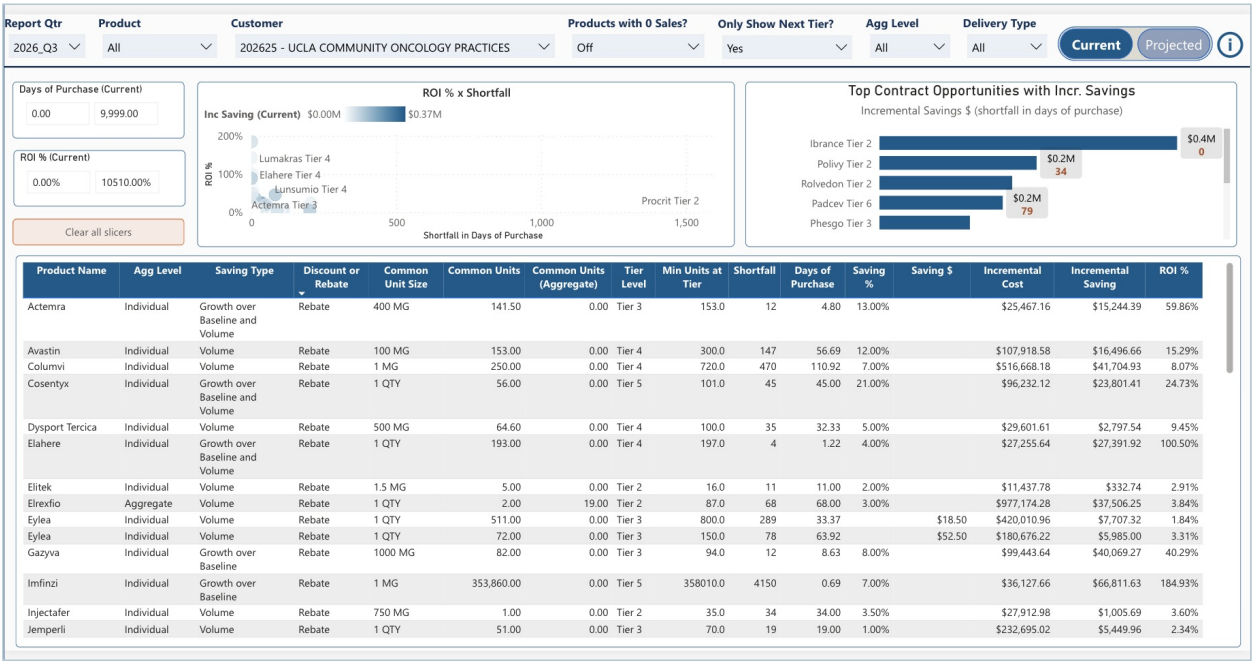

Incremental Cost = Contract Unit Cost × Shortfall
```

Opportunity Highlights

Narrowing to a Realistic Opportunity

Adjusting the **Days of Purchase** slicer — for example to a 5–10 day window — filters both the charts and the table down to only the opportunities achievable in that near-term window, turning a long list into a short, actionable one for a specific customer conversation.

What a 5–10 day window with ROI % of 10% or more leaves (Projected view)

Sarclisa — Tier 3, 19 units short, 6.66 Days of Purchase, 6.00% saving, ROI 15.49%. **Tecentriq** — Tier 2, 148 units short, 7.48 Days of Purchase, 6.00% saving, ROI 62.01%.

Product Name	Agg Level	Saving Type	Discount or Rebate	Common Unit Size	Common Units	Common Units (Aggregate)	Tier Level	Min Units at Tier	Shortfall	Days of Purchase	Saving %	Saving $	Incremental Cost	Incremental Saving	ROI %
Sarclisa	Individual	Volume	Rebate	100 MG	181.15	0.00	Tier 3	200.0	19	6.66	6.00%		$16,276.33	$2,520.58	15.49%
Tecentriq	Individual	Growth over Baseline	Rebate	120 MG	1,266.98	0.00	Tier 2	1414.0	148	7.48	6.00%		$168,229.70	$104,312.07	62.01%

Opportunity Highlights filtered to a 5–10 day purchasing window — narrows to just the achievable, near-term opportunities (Sarclisa, Tecentriq).

Tip: Tecentriq carries the larger return (62.01% ROI) but needs 148 more units; Sarclisa is a smaller gap with a lower return. Use the slicers to match the opportunity to what the customer can realistically buy before quarter end.
